Trans. of Bumazh[naya] Prom[yshlennost'] (USSR) 1955
[v. 30] no. 10, p. 7-10.

The effect of the change in the consistency of the stock entering the vat on the pressure of filtration and the physico-mechanical properties of the sheet being formed was examined at consistencies of 0.07, 0.10, 0.15, 0.20, 0.25, 0.30 and 0.40%, and at degrees of beating of 20, 30, 45, 60 and 75° S.R., using bleached sulphite pulp mark "A". The results show that the pressure of filtration changes in linear relation to the quantity of liquid being filtered only at degrees of beating of the pulp of 20 and 30° S.R. At degrees of beating of 45° S.R. and higher the pressure of filtration
